Office Action Summary

Art Unit 1756

1. This Office action is responsive to the paper filed November 13, 2002 wherein the rejections of record were discussed.

2. The Examiner withdraws the prior art rejections of record in view of the comments presented by applicants in the response.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-32 are rejected under 35 U.S.C. § 102(b) as being anticipated by Garza et al.

Garza et al. describe, teach and suggest the essential requirements of the instant invention as claimed for a method of compensating for flare-induced critical dimension changes in photolithography. Flare-induced changes are also referred to as back scattering of light changes or reflective notching issues for optical proximity correction. Garza et al. anticipates the scope of the protection sought specifically at column 12, line 5 - column 14, line 31.
